Objective of the FDP:

The objective of this FDP on "**Cryptography: Foundations and New Directions in Research**" is to provide the most important technical and theoretical aspects of modern Cryptography. Cryptography is a science that applies complex mathematics and logic to design strong encryption methods. The rapid increase of information transmitted electronically resulted to an increased reliance on cryptography. This leads to an increase in the need of security services such as confidentiality, integrity, authentication etc. These security services are solely depends on cryptographic algorithms. The aim is to provide fundamental theory, practical aspects and research direction are the major topics to be covered.

Outcomes of the FDP:

- ❖ Gain knowledge on basic principles of applied cryptography, including classical cryptography, modern secret key and public key cryptography.
- ❖ Identify Research Problems in the area of Cryptography.
- ❖ Participants can acquire skills in Cryptanalytic attacks.
- ❖ Understanding security (attacks and defenses) in complex real life systems and the role of keys, cryptographic algorithms and protocols.
- ❖ Hands-on Experience-Attacks on existing Ciphers viz DES, SHA-1 etc..
- ❖ Learn basic techniques to protect data in computer and communication environments against several different varieties of fraud.

Course Contents:

- ❖ Overview of Cryptology
- ❖ Mathematics for Cryptology
- ❖ Classical Cryptosystems
- ❖ Modern Block Ciphers, Stream Ciphers
- ❖ Public Key Cryptosystems
- ❖ Hash Functions and digital signatures
- ❖ Elliptic Curve Cryptography
- ❖ Pairing Based Cryptography
- ❖ Lattice Based Cryptography
